REMOTE SWIVEL BASE SYSTEM

Temporary or permanent solutions for your SL or RM LIGHTFORCE lights. Quick and simple, position the light on your vehicle or boat, in fact anywhere you can think of!

The locking Remote Swivel Bases (**RSB**) can be purchased with the option of 3 different attachments, Suction, *Magnetic or Bolt-on.

Made of UV stable injection moulded polymers and marine grade stainless steel fittings, these are excellent for bolting in a permanent position on a vehicle or boat. The suction or *magnetic type are ideal for temporary installations. The magnetic version is suitable for stationary non marine use.

RSB is supplied with fittings that allow the mounting of either the **RM** or **SL** models on a ball joint. The mounted light can be rotated through 360 degrees, elevated as required and locked onto a target. The light can be quickly removed for hand held use, e.g. training on a moving target, yet easily replaced and secured with a locking wheel. It is also very effective for the mounting of a camera or spotting scope.

BULK HEAD MOUNTING BRACKET

No more searching! It's easy!

LIGHTFORCE has developed a handy Bulk Head Mounting Bracket (**BMB**) that is suitable for securing onto many surfaces for storage of a spotlight. It is ideal for mounting in vehicles, caravans, shed / garage wall or in boat cabins. The bracket accepts all SL hand held lights as the handles are the same size, more smart thinking from LIGHTFORCE!
